

INNO-IMMUNE

with **EPICOR®**

Inno-Immune is an all-natural, vegetarian health supplement that helps support the immune system against colds and flus. The backbone of Inno-Immune is EpiCor® – a truly unique ingredient, as it does not work by over-stimulating or “boosting” the body’s immune system as most products do. Instead, EpiCor® acts by “educating” the immune system to help your body respond appropriately to pathogens in a timely fashion.

Taken daily, Inno-Immune is a safe and effective way to help support immune system and maintain overall health.

Immune Balance and Health

The immune system is designed to protect the body from invading pathogens such as bacteria, viruses and parasites to keep us healthy and disease free. Unfortunately, anything that stresses us may cause chaos on our immune health, including everyday psychological stress, physical exertion or lack of exercise, pollution, lack of sleep, poor nutrition, travel, the normal aging process and change in climate. When our immune system is out of balance, this can result in a host of health issues such as colds and flu, allergies, weakened stress defense, inflammation, weight gain, digestive problems, sleep issues and premature aging.

Inno-Immune contains:

Epicor®: Enhances the body’s immune reaction by activating natural killer (NK) cells and increasing the levels of CD4 “helper cells” and at the same time decreasing levels of CD8 “suppressor” cells. Also increases the levels of secretory IgA – a major first line of defense in infections that enter via mucosal surfaces (mouth, nasal passages, gastrointestinal tract). Secretory IgA has proven to be a powerful antiviral agent and makes our mucous membranes far more impervious to pathogens.

Oregano: Evidence suggests the leaf and essential oil have anti-bacterial, anti-fungal, and expectorant activity.

Zinc: Important for normal functioning of the immune system. Zinc is key to proper white blood cell activity (T-cells, NK cells, and lymphocytes), and may be directly involved in antibody production to help you fight infections.

Vitamin D3: A potent immune system modulator essential for T cells and antigen-presenting cells, such as macrophages. It also increases the body’s production of antimicrobial peptides and natural antibiotics (e.g. cathelicidin). These compounds directly and rapidly destroy the cell walls of bacteria, fungi, and viruses, including the influenza virus, and play a key role in keeping the lungs free of infection.
